OV1: Overview of RWA (continued)

		(HK\$'000)		
		(a)	(b)	(c)
		RWA		Minimum capital requirements
		30/09/2018	30/06/2018	30/09/2018
26a	Deduction to RWA	312,236	308,457	24,979
26b	Of which portion of regulatory reserve for general banking risks and collective provisions which is not included in Tier 2 Capital	-	-	-
26c	Of which portion of cumulative fair value gains arising from the revaluation of land and buildings which is not included in Tier 2 Capital	312,236	308,457	24,979
27	Total	641,201,309	673,325,490	51,296,104

The Group is in compliance with the Banking (Capital) Rules to calculate the risk-weighted assets (RWA). The Group adopts the standardized (credit risk) approach (STC) for the non-securitization credit risk RWA (including equity exposure and CIS exposure) calculation, the current exposure method (CEM) for the counterparty credit risk RWA calculation, standardized CVA method for the CVA risk RWA calculation, the standardized (market risk) approach (STM) for the market risk RWA calculation, the basic indicator approach (BIA) for the operational risk RWA calculation. There was no settlement risk, nor securitization exposure RWA on the reporting date. There was neither regulatory reserve nor collective provision which needed to be deducted from RWA. There was no RWA capital floor adjustment. Compared with 30 June 2018, the RWA of "Counterparty default risk and default fund contribution of which others" decreased 21.0% on 30 September 2018 was mainly due to HKD 649 million decrease of securities financing transactions (SFTs)' RWA. The other RWA items only had small or moderate fluctuations as business development.

LR2: Leverage ratio ("LR")

LR2: Leverage ratio ("LR") (continued)

Compared with 30 June 2018, the exposure "Less: Deductions of receivables assets for cash variation margin provided under derivative contracts" increased 76% on 30 September 2018 was mainly due to HKD 1,493 million increase in variation margin. Also, there is a 29.0% decrease in Gross SFT assets on 30 September 2018, this is due to HKD 17.06 billion decrease in SFTs Principal. This has caused major changes in total exposures arising from SFTs decreased in HKD 17.8 billion. The other items only had small or moderate fluctuations as business development.

Liquidity Coverage Ratio

The Liquidity Coverage Ratio ("LCR") throughout the first three quarters of 2018 meets regulatory requirement and maintains at a high level.

(i) Main drivers of its LCR results

The Bank's LCR's change is mainly due to the HQLA change, as well as various kind of asset and liability matured. Currently, the high LCR level is due to less net cash outflow matured within 30-days range, which is resulting from outflow decrease and inflow decrease being capped at 75% of outflow amount.

(ii) Composition of High Quality Liquid Assets ("HQLA")

The Bank holds a portfolio of unencumbered HQLA which can be readily liquidated to meet cash flow obligations under stress scenarios, as defined in the LCR rules. These liquid assets consist primarily of Level 1 HQLA, such as the Hong Kong Exchange Fund bills and notes as well as the US Treasuries, supplemented by Level 2A and 2B HQLA, such as bonds issued by highly rated corporate issuers.

(iii) Concentration of funding sources

The Bank maintains a diversified funding base composed mainly by retail and corporate customer deposits, supplemented by wholesale funding including but not limited to issuance of certificates of deposit and term debts. Short-term interbank money market borrowing is also used from time to time to meet temporary funding need.

The Bank continues to expand and diversify its deposit base, and to increase the proportion of stable deposits in its overall funding pool.

(iv) Derivative Exposures

The Bank closely monitors all its exchange traded and over-the-counter derivative exposures arising from customer transactions and their corresponding hedging activities. Such derivative contracts comprise mainly of foreign exchange forwards, interest rate and cross currency swaps. Collateral may be required to be posted to counterparties depending on the marked-to-market of the derivative contracts.

LIQ1: Liquidity Coverage Ratio ("LCR") – for category 1 institution (continued)

(v) Currency mismatch

The Bank's customer deposits are mainly denominated in HKD. To meet customer loan demand, the Bank swaps surplus HKD funding into USD and other foreign currencies. This represents the major currency mismatch of the Bank.

On the other hand, as the supply of HKD denominated HQLA is relatively limited, the Bank covers its HKD mismatch by holding HQLA denominated in USD when necessary. This is in line with the LCR alternative liquidity approach option elected by the HKMA.

(vi) Centralization of liquidity management

The Bank has a wholly owned subsidiary in the Mainland China, namely China Mercantile Bank ("CMB"), which has set up its own liquidity risk management policy and managed liquidity risk in accordance with its local regulatory requirements. CMB calculates its own LCR, which would then be consolidated with the Bank's LCR to reflect the liquidity position on a Group basis.

(vii) Approach to liquidity risk management

The Bank has established a comprehensive liquidity risk management framework in accordance with the HKMA requirements and BCBS guidance. The Board is ultimately responsible for liquidity risk management, with the support from Board Risk Management Committee, senior management committees including the Senior Management Risk Management Committee and the Asset and Liability Management Committee. Policies and procedures are in place, with properly approved limits and indicators in order to identify, measure and monitor liquidity risk. Stress tests are conducted regularly, and the Bank has readied the Contingent Funding Plan which details the procedures in dealing with a potential liquidity crisis.
