¹ This table uses the rating scales of Standard & Poor's, Fitch Ratings and Moody's Investors Service. (Fitch Ratings' scale is identical to Standard & Poor's.)

Note 14 – Fair Value of Financial Instruments (continued)

Fair value Assumptions

- i. The carrying value of cash and cash equivalents is the fair value.
- ii. For on demand and deposits from customers maturing within six months, due from/to other financial institutions, the carrying value is considered to be the fair value; for those categories with maturities more than six months, the fair value is calculated on a discounted cash flow basis using the current interest rate offered for a similar maturity.
- iii. The carrying value of loans and advances to customers is net of allowance for impairment loss. For loans and advances to customers maturing or repricing within six months, the carrying value is considered to be fair value; for those categories with maturities more than six months, the fair value are calculated on a discounted cash flow basis using the current interest rate offered for a similar maturity.
- iv. For amounts due from/to related parties maturing or repricing within six months, the carrying value is considered to be fair value; for those categories with maturities more than six months, the fair value is calculated on a discounted cash flow basis using the current interest rate offered for a similar maturity.
- v. The fair value of financial assets held to maturity, derivative financial instruments, and debt securities is determined by a discounted cash flow basis, which is based on the interest rate repricing and maturity of the instruments.
- vi. The carrying value of other financial assets and liabilities is considered to be the fair value.

Fair Value Measurements Recognised in the Balance Sheet

Under NZ IFRS 7, the fair value of financial instruments is determined on a hierarchical basis that reflects the significance of the inputs used in making the measurements. The fair value hierarchy is:

- Level 1 fair value measurement are those derived from quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 fair value measurements are those derived from inputs other than quoted prices included within level 1 that are observable for the assets or liabilities, either directly (i.e. as prices) or indirectly (i.e. derived from prices); and
- Level 3 fair value measurements are those derived from valuation techniques that include inputs for the assets or liabilities that are not based on observable market data (unobservable inputs).

Note 15 – Liquidity Risk

Liquidity risk is the risk that funds will not be sufficient or will not be raised at a reasonable cost in a timely manner to meet the needs of asset growth or repayment of debts due, although remaining solvent. This may arise from amount or maturity mismatches of assets and liabilities.

The Bank manages its liquidity risk through the Treasury Department and aims at:

- 1 Optimising the structure of assets and liabilities;
- 2 Maintaining the stability of the deposit base;
- 3 Projecting cash flows and evaluating the level of current assets; and
- 4 Maintaining an efficient internal fund transfer mechanism/agreement with the Parent Bank for liquidity.

The tables below summarise the cash flows payable or receivable by the Bank under financial assets and liabilities by remaining contractual maturities at the balance sheet date. The amounts disclosed in the table are contractual undiscounted cash flows and include both principal and associated future interest payments and therefore will not agree to the carrying values on the balance sheet. Actual cash flows can differ significantly from contractual cash flows as a result of future events.

Accrued interest within the other financial assets/ liabilities captions in the statement of financial position is included in this table in the row in which the related financial instrument is presented.

Note 16 – Capital Adequacy

(a) Issued Capital

The Bank had 145,459,975 fully paid up ordinary shares (tier one capital) issued at NZ \$1 per share as at 30 September 2016.

A further capital injection of NZ\$85,082K was received from ICBC on 5th July 2016 and subsequently additional shares were issued making the total share capital NZ\$145,460K. (30 September 2015: NZ\$60,378K, 31 December 2015: NZ\$60,378K).

ICBC is the sole shareholder. Each share confers on the holder the right to:

- one vote on a poll at a meeting of the shareholders on any resolution to:
 - appoint or remove a Director or auditor; or
 - alter the Bank's constitution; or
 - approve a major transaction; or
 - approve an amalgamation under section 221 of the Companies Act 1993; or
 - put the Bank into liquidation;
- a proportionate share in dividends authorised by the Board; and
- a proportionate share in the distribution of the surplus assets of the Bank.

(b) Other Classes of Capital Instrument

The Bank does not have any other classes of capital instrument in its capital structure.

Regulatory capital adequacy ratios are calculated by expressing capital as a percentage of risk weighted exposures. As a condition of registration, the Bank must comply with the following minimum capital requirements set by the RBNZ:

- The Total capital ratio of the Banking Group is not less than 8%;
- The Tier 1 capital ratio of the Banking Group is not less than 6%;
- The Common Equity Tier 1 capital ratio of the Banking Group is not less than 4.5%; and
- The Total capital of the Banking Group is not less than \$30 million.

The capital adequacy tables set out below summarise the composition of regulatory capital and capital adequacy ratios as at 30 September 2016, 30 September 2015, and 31 December 2015. The Bank has complied with both regulatory and internal capital adequacy requirements.

The Bank has considered other material risks not included below and whether to allocate any capital to cover these risks and concluded that these risks are not significant and has therefore not allocated any capital to cover them.

Credit Risk Mitigation

The Bank recognises on- and off-balance sheet netting in a simple and limited form. It is used to measure the mitigating effects of collateral for corporate loans secured by deposits and mortgage loans secured by charge over residential property.

(i) Market Risk

Market risk exposures have been calculated in accordance with the methodology detailed in Part 10 of the RBNZ's BS2A Capital Adequacy framework, and schedule 9 of the Registered Bank Disclosure Statements (New Zealand Incorporated Registered Banks) Order 2014 (as amended) (the "Order"). Peak exposures are calculated using the Bank's shareholders equity at the end of the period.
