THIS IS AN INSURANCE PRODUCT THAT IS TIED TO THE PERFORMANCE OF THE UNDERLYING ASSETS, AND IS NOT A PURE INVESTMENT PRODUCT SUCH AS UNIT TRUSTS.

IMPORTANT:

- You should read this illustration together with the fund fact sheet(s) of the investment fund(s) which You have chosen. The fund fact sheet contains all the important information that You will need to know regarding the investment fund(s).
- Since only a part of the Basic Premium for the first five policy years (as shown in the Allocated Premium table in Product Notes) is used to purchase units, while 95% of top-up is used to purchase units, **You can maximize Your investment value by minimizing Your annual premium and maximizing Your top-ups.**
 - Minimum Annual Regular Premium Required: MYR 1,500
 - Minimum Annual Top-up Premium Allowed: MYR 150
 - Minimum Lump Sum Premium Allowed: MYR 1,000
- Therefore, if Your purchase involves a premium of sizeable amount say MYR 5,000 and above, You should consider purchasing single premium investment-linked insurance plan (rather than a Regular Premium Policy) as single premium plans offer better allocation rates for investment. Your investment-linked insurance plan will lapse or terminate if there is not enough Units in Your Account Value to pay the charges.
- Your Units may not be enough over the years due to:
 - High insurance charges if You buy many riders, and especially if the charges are increasing over time as You get older.
 - Poor investment returns.
 - Premium holiday i.e. if You stop paying premiums for a long period of time.

WARNING
YOUR INSURANCE CHARGES WILL INCREASE AS YOU GET OLDER. IN THE LATER YEARS, IT IS POSSIBLE THAT THE ACCUMULATED ACCOUNT VALUE IS NOT ENOUGH TO PAY FOR YOUR INSURANCE CHARGES DUE TO POOR INVESTMENT RETURNS, WHICH WILL RESULT IN YOUR POLICY BEING CANCELLED. YOU MAY NEED TO INCREASE YOUR PREMIUMS OR REDUCE THE LEVEL OF INSURANCE PROTECTION, IF YOU WANT TO MAINTAIN YOUR POLICY.

Note: You should ask Your Sales Personnel to explain to You about the insurance charges (if any) and its effect on Your future insurance coverage. Please refer to the product notes page for explanation.

SUMMARY ILLUSTRATION:

- This summary illustration is intended to show the movements of possible cash flows for the investment and the impact of fees and charges on the Account Value based on the illustration below.
- The projected net investments returns used below are for illustrative purposes and not meant to show the possible returns of Your chosen investment fund(s). They are not guaranteed and not based on past performance.
- Actual returns of the fund will fluctuate (i.e. rise or fall) each year based on the performance of the assets the fund invests in.
- The actual returns may even be below the projected rates or negative.
- Where '-' is shown in the illustration below (if any) for Surrender Value and Death Benefit, it indicates that the Policy has lapsed due to insufficient Account Value to pay the charges.
- Please refer to the Product Notes page for explanation.
- The projected values are net of premium charges on the annual Regular Premium and regular top-up / lump sum premium; fund management fees and insurance charges shall be deducted monthly from the Account Value. Please refer to the Premium Allocation And Charges page for a summary of the charges.

- Actual returns of the fund will fluctuate (i.e. rise or fall) each year based on the performance of the assets the fund(s) invested in.
- Please see the attached fund fact sheet(s) for the past actual annual investment returns.

Features of Fund										
Investment Objective	The fund aims to provide a steady income stream over a medium to long-term period through investments in Shariah-approved securities.									
Investment Strategy & Approach	<p>The strategy for Shariah compliant investments in local Sukuk would be driven by the interest rate outlook for the market over the medium to long-term horizon. This will enable the Fund Manager to decide on the maturity structure for the investments of the fund. Additionally, the Fund Manager will constantly seek potential credit upgrade issues and avoid potential downgrade issues to maximise returns for unit holders.</p> <p>Note that, although the fund invests in Shariah-approved securities, the investment-linked insurance plan itself is not classified as a Shariah-compliant product.</p>									
Asset Allocation	A minimum of 95% of the fund's NAV will be invested into AHAM Aiiman Income Plus Fund. The balance of the funds' NAV will be invested in liquid assets.

Risks		
Investment in the funds are subject to certain risks, including but not limited to:		
Risks	Description	Risk Management
Market Risk	Market risk arises when the value of the securities fluctuate in response to the general market and economic conditions.	The market risk is managed through portfolio diversification and asset allocation whereby the securities exposure will be reduced in the event of anticipated weakness in the market.
Fund Management Risk	The selection of securities which make up the investments of the funds is subjective and the securities selected may perform better or worse than overall market.	This risk is managed by having a professional and experienced investment manager.
Credit Risk	Credit risk is the risk of loss due to the inability or unwillingness of a counter-party to meet the payment obligations of principal and/or interest.	The Fund Manager manages the credit risk by imposing counter-party limits at fund level as well as assessing the credibility of the counter party and its ratings.
Liquidity Risk	Liquidity Risk includes both the risk that assets may not be realized at their fair value in a short period of time, and the risk that the Company may not have enough access of liquid assets to meet its cash outgo obligations.	The risk is managed by monitoring the projected and actual cash inflows and outflows and by ensuring that a reasonable amount of financial assets are kept in liquid instrument at all times.
Operational Risk	This risk is attributed to failures in the operation of the Company due to fraud, inadequate monitoring systems, legal matters, management failure, defective controls, and human errors. This risk is not directly related to market risk, credit risk or liquidity risk.	The risk is managed by having adequate internal controls which would include (list not exhaustive) well documented work processes, investment policies, proper segregation of duties, competent personnel assigned to the work, regular checks, monitoring and reporting etc.

<p>• Past performance of the fund is not an indication of its future performance.</p> <p>• This is strictly the performance of the investment fund, and not the returns earned on the actual premiums paid of the investment-linked product.</p> <p>• Past performance is calculated based on the unit price of the fund. Eg. year 2022 annual investment return is derived from the following formula:</p> $\text{The annual investment return in 2022} = \frac{\text{UP} * 31 \text{ December } 2022 - \text{UP} * 31 \text{ December } 2021}{\text{UP} * 31 \text{ December } 2021} \times 100\%$ <p>Where *UP 31 December = the fund's unit selling price on 31 December.</p>

Risks		
Investment in the funds are subject to certain risks, including but not limited to:		
Risks	Description	Risk Management
Market Risk	Market risk arises when the value of the securities fluctuate in response to the general market and economic conditions.	The market risk is managed through portfolio diversification and asset allocation whereby the securities exposure will be reduced in the event of anticipated weakness in the market.
Fund Management Risk	The selection of securities which make up the investments of the funds is subjective and the securities selected may perform better or worse than overall market.	This risk is managed by having a professional and experienced investment manager.
Credit Risk	Credit risk is the risk of loss due to the inability or unwillingness of a counter-party to meet the payment obligations of principal and/or interest.	The Fund Manager manages the credit risk by imposing counter-party limits at fund level as well as assessing the credibility of the counter party and its ratings.
Liquidity Risk	Liquidity Risk includes both the risk that assets may not be realized at their fair value in a short period of time, and the risk that the Company may not have enough access of liquid assets to meet its cash outgo obligations.	The risk is managed by monitoring the projected and actual cash inflows and outflows and by ensuring that a reasonable amount of financial assets are kept in liquid instrument at all times.
Operational Risk	This risk is attributed to failures in the operation of the Company due to fraud, inadequate monitoring systems, legal matters, management failure, defective controls, and human errors. This risk is not directly related to market risk, credit risk or liquidity risk.	The risk is managed by having adequate internal controls which would include (list not exhaustive) well documented work processes, investment policies, proper segregation of duties, competent personnel assigned to the work, regular checks, monitoring and reporting etc.
